

PRITCHARD

Technologies, Inc.

PROFESSIONAL CONSULTING & SERVICES

The Problem:

Your polymer filtration systems are regarded as a “necessary evil”. They have become a constant source of operation, maintenance and safety issues. You need reliable, user-friendly equipment that is safe, easy to operate and simple to maintain. Where do you turn for solutions to these and other process equipment problems?

The Solution:

Pritchard Technologies, Inc.

We specialize in the design, operation and maintenance of polymer filtration systems and other chemical process equipment. Our services include:

- Engineering, Design, Procurement and Construction Management of New Systems
- Performance Analysis of Existing Systems
- Operation and Maintenance Reviews and Consultations
- Research and Development
- Equipment Upgrades and Retrofits
- System Component Repairs and Refurbishments
- Polymer Diverter Valve Replacements, Repairs and Upgrades
- Field Services including Assembly, Testing, Installation, Start-Up and Repairs

The Results:

Pritchard Technologies, Inc. can provide you with the solutions that you need to maximize your system’s performance and minimize your operating problems and expenses. We can show you how to optimize filter transfer procedures, correct system misalignment, prevent leakage, improve valve actuation, offer suggestions for filter housing installation and removal, review element cleaning procedures and assist in many other problem areas

Take the first step by contacting **Pritchard Technologies** at (803) 831-1619 to discuss your application and receive the information that will **eliminate the problems associated with your filtration systems and process equipment.**

Pritchard Technologies, Inc. provides design, manufacturing, research and development, field services, and professional consulting in the area of polymer filtration systems and chemical process equipment.
